| <p>I view programming as an outlet where I can combine my creativity and logical thinking. The challenges it creates, I feel are matching the level of my curiosity and from the beginning of learning to program, I realized how much satisfaction I get by learning a new CSS or JS concept and then bringing it to life. Although the beginning of a project or a task might be scary, later on it becomes very rewarding, creates childlike happiness and at times feels addictive :) Currently I focus on improving my Angular framework knowledge and experimenting with code monitoring and UI experience tools.</p> |

|                     | Rebuilt an internal agreement management application (decommissioned an older one). This web application focuses on a lifecycle of agreements in SEB (uploading, searching, editing, terminating...). Here I gained experience developing an application almost from scratch as a sole frontend developer (choosing libraries, authentication, quite a lot work with Angular forms, integrated with Sonarqube and AppDynamics for UI experience monitoring, working in Agile env. and more). |
